

Scientific Tuesdays

June 14: [Living in Space – NASA's Space Stations](#)

From Skylab to the current International Space Station to the future Moon Space Station, Gateway. Learn about the challenges and effects of living in space.

June 21: [March of the Invasive Insects](#)

Learn about the new invasive insects and their impact on Indiana and the Upper Wabash. Including: How to identify them, how to report them to the authorities, and how to “control” them.

June 28: [D.I.Y. Kitchen Chemistry & Physics](#)

You can do chemistry and physics experiments (with adult supervision) using items found in your kitchen. We will do the experiments during the program. And you can do the experiments again at home using the provided booklet (with adult supervision).

July 5th: [Your Questions & The Chemistry and Physics of Fireworks](#)

At each program from June 14 to 22, we will collect your questions about science, nature, and conservation. On July 5th we will answer a select number of the questions. Followed by lab experiments demonstrating the chemistry and physics of common fireworks.
